Professional Profile

I am a student at The University of Edinburgh, currently in my 4th and final year of undergraduate study in Honours Artificial Intelligence and Computer Science. I am currently seeking graduate jobs in the fields of software development, data science, artificial intelligence, and cybersecurity. I work effectively and collaboratively with others, and I am adept at picking up new technologies and skills.

Education

The University of Edinburgh, BSc (Hons) Sept 2022 – Present
Artificial Intelligence and Computer Science
(Graduating June 2026)

- **Currently sitting at a 1st Class Honours (Predicted)**
- **Relevant Completed Courses:** *Machine Learning, Natural Language Processing, Linear Algebra, Calculus, Discrete Mathematics and Probability, Reasoning and Agents, Object-Oriented Programming, Algorithms and Data Structures, Computer Security, Software Engineering and Professional Practice, Computational Cognitive Science, Introduction to Computer Systems.*
- **Relevant Completed Coursework:**
 - Worked in a team of 8 to create a robotic arm capable of playing a simplified version of Scrabble, designed to assist with children's language learning. Worked on every stage of the project, including 3D modelling, programming, market research, engineering, user analytics, and report writing.
 - Implemented and optimized an encoder-decoder, attention-based AI model to translate English to German. Additionally analysed its performance, and used techniques to understand its inner workings.
 - Implemented a REST API based server application for a drone delivery service, using Java and Spring Boot. The application handled data validation, order processing, and path finding algorithms for GeoJSON.
 - Worked with others to carry out an investigation into university student satisfaction, using numerous data science techniques such as regression, clustering, and inferential statistics.
 - Used greedy algorithms to find solutions to problems like the *Independent Set Problem*, analysing their NP completeness and approximations.
 - Implemented, and analysed an improved version of the *Rescorla-Wagner* model of classical conditioning, designing and running computational experiments to investigate differences in individual's learning.
- **Currently Taking:** *Advanced Topics in Machine Learning, Machine Learning Practical, Probabilistic Modelling and Reasoning, Computational Neuroscience, Applied Cloud Programming, Honours Project.*

Williamwood High School, Scottish Highers Aug 2016 – May 2022

- Achieved an **A** in *Higher Mathematics, Higher English, Higher Biology, Higher Computer Science, and Higher RMPS.*
- Elected Deputy Captain.

Experience

Software-related Experience

Cybersecurity Programme, HM Government – June 2025 – Sept 2025
North West England

- Completed a 10-week government cybersecurity programme, working with technologies such as Metasploit, Nmap, and Wireshark.
- Performed penetration testing and privilege escalation on vulnerable systems, accessing them through various methods such as SQL injection, SMB attacks, and more.
- Gained experience working in a collaborative, client-driven environment in information assurance and risk

management.

- Continually developed through report writing, presentations, and reflective practices.

Work Experience, Endava – Scotland

July 2021 – Aug 2021

- Worked with server networking and cloud deployment.
- Observed senior team meetings and their planning methods.
- Followed an experienced team member to learn job skills and listened to directives to complete accurate work.

Work Experience, NHS Ayrshire & Arran Digital Health and Care Directorate

Oct 2019 – Oct 2019

- Helped troubleshoot technical problems surrounding NHS servers and computers.
- Listened to directives from senior staff to complete tasks and communicated clearly and efficiently to achieve them.

Other Experience

Retail Assistant, Holland & Barrett – Central Edinburgh

July 2024 – Oct 2024

- Helped customers find personalised solutions to their ailments and concerns. Gathered information about their condition and critically analysed the best products for them.
- Worked as a team to meet sales metrics and to carry out the logistics of maintaining the store.
- Created a warm and welcoming atmosphere for customers, wherein they felt comfortable discussing their concerns and where they felt we had made an impact.
- Completed training to become an expert on vitamins, minerals, macronutrients & micronutrients, and other health-related topics.

Projects

Social Media Hate Speech Detector

github.com/Joseeeeeeeeph/Hate-Classification

- Developed a hate speech detection model using a dataset of tweets and other online text. Collected and processed a 130,000+ sample dataset, trained a model with an attention Bi-LSTM architecture, and evaluated the model's performance.
- Tools Used: Python, PyTorch

Convolutional Image Processor and Editor

github.com/Joseeeeeeeeph/Convolution-Algorithm

- Developed a fast image convolution algorithm, as well as tool for processing and converting bitmap images, in C. Implemented functionality for box blur, Gaussian blur, and Laplacian edge-detection.
- Tools Used: C

Technologies

Languages: Python, C++, C, Java, Haskell

Technologies: PyTorch, Linux, Git, Docker, Spring Boot, Transformer Models, MCP Servers, HTML, CSS, Metasploit, Nmap, Wireshark, Pandas, LaTeX

Awards

Duke of Edinburgh Award, Bronze

Soft Skills

- **Collaborative:** Able to work effectively in a group setting, and excel at listening to and collaborating with others. Can adapt to different roles within a team efficiently.
- **Problem-Solving:** Strong analytical and problem-solving skills, with the ability to think critically and creatively to find solutions.
- **Adaptability:** Quick learner who can adapt to new environments, technologies, and challenges with ease.
